Primavera P6 Enterprise Project Portfolio Management

**“To handle the multitude of interdependent activities that make up each aircraft reconfiguration project, we needed a culture shift to a more proactive project management approach. Not only has Oracle’s Primavera P6 Enterprise Project Portfolio Management fostered that culture shift, but it has helped us to standardize on an earned value management process that enables us to pinpoint and quickly correct deficiencies, improving performance.”** – Kaushik Sheth, Program Planning & Controls Manager, B/E Aerospace, Inc.

## B/E Aerospace, Inc. Delivers Timely Aircraft Interior Reconfigurations with Integrated Program Management

B/E Aerospace, Inc. is a leading global manufacturer of aircraft passenger cabin interior products for the commercial and business jet aircraft markets, as well as a leading global distributor of aerospace fasteners. The Flight Structures division is focused on aircraft interior reconfigurations, passenger to freighter conversions, and integrated program management.

### Challenges

- Improve ability of the Flight Structures division to efficiently integrate data from diverse sources to complete aircraft interior reconfigurations
- Foster a culture to support a proactive, integrated program management approach
- Support the complexity of highly integrated aircraft interior redesign/reconfiguration programs

### Solution

- Replaced a series of disparate project management systems with Oracle’s Primavera P6 Enterprise Project Portfolio Management
- Developed integrated program schedules to plan and control deliverables on complex integration and original equipment manufacturer programs
- Provided cross-program visibility into key deliverables and deadlines for the company’s approximate 10 concurrent programs, establishing a single source of true dates for all involved parties
- Initiated a culture shift to a proactive, planning-based approach utilizing the earned value management (EVM) process, which ensures accountability from all parties involved in each project
- Leveraged EVM metrics to pinpoint and correct deficiencies in resources or performance on a weekly basis
- Migrated 80% of resource management into Oracle Primavera P6, with future plans to include 100%, further improving efficiency
- Supported the complex contracting structure where the aircraft owners contract with the suppliers, but B/E Aerospace is responsible for overall project success
- Developed a Primavera-based solution to track and control certification deliverables for Federal Aviation Administration compliance
