Primavera P6 Enterprise Project
 Portfolio Management

**"With Oracle's Primavera P6
Enterprise Project Portfolio
Management, we improved our
internal communication
processes and replaced multiple
spreadsheets with one
centralized, easy-to-use
database for all project-related
information. With real-time
visibility, we improved our rate
of on-time project delivery by
25% to 30%."** – Robert Perrine,
Constructability Review Engineer,
Delaware Department of
Transportation

Delaware DOT Optimizes Program Management with Enterprise Project Management Solution

The Delaware Department of Transportation's (DOT) mission is to provide a safe, efficient, and environmentally sensitive transportation network that offers a variety of convenient and cost-effective choices for the movement of people and goods.

Challenges

- Align planned expenditures and project timelines with revenue sources and orchestrated workflow
- Improve communication and visibility into the status of road and bridge design, maintenance, and paving and rehabilitation projects by eliminating spreadsheets used for capital project management
- Enable the efficient allocation of federal stimulus funds and ensure the department meets all guidelines

Solution

- Replaced 50 to 75 spreadsheets for tracking capital projects by implementing Oracle's Primavera P6 Enterprise Portfolio Management to house all past, current, and future project data
- Managed and provided real-time visibility into approximately 16,000 projects across the enterprise
- Improved communication processes by enabling managers to collectively examine resources and funding across the portfolio
- Improved rate of on-time project delivery by 25% to 30%
- Provided visibility needed to quickly make scheduling decisions and meet federal criteria for stimulus funding—spending 50% of funds within 60 days, as mandated, and completed 48 new projects on time
- Leveraged Oracle Primavera to innovatively integrate roadway and bridge GIS information , enabling DOT to view various projects in one area and combine field teams for greater efficiency and sustainability
- Accelerated time required for change approvals from more than one month to just one or two days
- Identified and improved outstanding project issues, documents, and construction scheduling—keeping projects on schedule and coming in 10 % to 15% below budget in many cases
- Enabled analysis for projects up to a year in advance— pinpointing delivery dates, improving government performance grades and helping to secure additional funding
