US\$421.78 million

Employees:

3,000

Oracle Products & Services:

Primavera P6 Enterprise Project
Portfolio Management
Primavera Contract Management
Primavera Risk Analysis

"Hill International manages very complex construction projects all over the world. Moving to Oracle's Primavera P6 Enterprise Project Portfolio Management enabled us to make entire project teams more effective and efficient and provided much greater visibility into project status—driving better decision-making and reducing risk across the company." – Shawn Pressley,
Vice President of Project Management Systems, Hill International

Hill International Streamlines Project and Program Management for Construction Projects

Hill International provides program, project, and construction management, as well as construction claims and consulting services. *Engineering News-Record* magazine ranked Hill as the largest independent U.S. construction management firm (for fee only) on June 14, 2010

Challenges

- Streamline business processes by implementing an integrated project management platform to manage a high volume of large and small construction projects at many locations worldwide
- Update tools and technology by transitioning from a client-server to a Web-based model—increasing participation from the extended enterprise and leveraging experts and resources across similar construction projects worldwide
- Enhance the company culture and value of project controls by improving visibility into performance status across the business for executives and stakeholders

Solution

- Upgraded Oracle's Primavera P3 to Primavera P6 Enterprise Project Portfolio Management to approximately 90 offices and 150 project sites, providing a centralized, Web-based system that improved visibility into project status worldwide
- Leveraged integration between the Primavera applications to provide dashboards that aggregate information to project teams and senior management
- Enabled centralized access to best-practice project plans and schedules, applying them to current projects
- Streamlined project planning and scheduling processes, reducing planning cycle time by 66%
- Provided visibility into current project performance metrics, enabling management to predict performance for the quarter or the year and improving forecast accuracy from 65% to 75%
- Enabled Hill to track actual and projected project costs for major initiatives, like the US\$400 million Comcast Center construction project in Philadelphia, to accurately anticipate project completion costs within .001% of total budget
- Managed risk and enhanced productivity, efficiency, and collaboration across the entire project management cycle with an overall increased business service level of 10%
