

Portfolio Process Optimization

Improve your use of Primavera EPPM to better identify and assess the performance of your portfolio of projects

This fixed price workshop is led by PSG consultants who identify best practices for using Primavera EPPM with your portfolio management processes to provide better executive and management visibility. Use the workshop recommendations with your in-house resources to refine your use of Primavera or leverage the skills of PSG consultants to do the work for you.

Changes in company priorities, organizational structure as well as changing and evolving PMO processes and priorities all signal an opportunity to review your use of Primavera EPPM to determine if you are realizing the maximum value and return on investment desired from Primavera software.

PSG's Portfolio Process Optimization Workshop provides services and tools that help you use Primavera Software to improve visibility into your projects and portfolios for accurate information on their performance. Lack of management and executive visibility on projects and programs can jeopardize executive support as well as funding due to increased uncertainty around project information and strategic alignments. Redundant and non-strategic projects use up and organizations limited resources and budgets. With PSG's Portfolio Process Optimization services you can address these challenges by effectively using Primavera EPPM to better access and manage portfolio status, cost, resource use, success and issues.

The workshop results in a roadmap that helps you use Primavera to better align and optimize the project portfolio and enable improved portfolio organization and review processes. Your team may implement this roadmap it's self, or can request they be implemented by PSG consultants.

Services to Make You Successful

PSG offers a spectrum of professional services that help you implement quickly and optimize your use of Primavera Softwares to help you fully maximize the return on your investment. Our professional services team and implementation partners are experienced in portfolio and project management, and use their knowledge of business processes and real world experience to ensure your successful deployment and adoption of Primavera software.
