

## Methodology Improvement

**Optimize your use of Primavera Software to refine  
and support project methodologies to increase efficiency and success**

This fixed-price workshop is led by PSG consultants who identify best practices for using your Project Management Solution to help tailor methodologies and more effectively manage a work portfolios. You can use the workshop recommendations and your in-house resources to optimize your use of Primavera, or leverage the skills of PSG's consulting team to do so for you.

Making modifications or introducing new methodologies to your business processes signals an opportunity to review your use of Primavera software to determine if you are taking full advantage of the system to maximize the value and return on investment desired.

As the project portfolio manager, you may find that a single company-sanctioned methodology is not appropriate for every type of project and can jeopardize project success. However, reporting across multiple methodologies is not easily assimilated by organizations and can result in inaccurate or confusing cross-project reports.

PSG's Methodology Improvement Workshop provides services and best practice tools that help you determine or refine the appropriate methodology across projects. It helps you understand how to use Primavera to obtain optimum visibility across your portfolio even when using various execution methods. The workshop results in a roadmap with recommendations for consistent project execution and for instituting approved methodologies for Project and Portfolio Management. You can implement the roadmap recommendations yourself, or request PSG consultants to implement them for you.

### Services to Make You Successful

PSG offers a spectrum of professional services that help you implement quickly and optimize your use of Primavera EPPM to help you fully maximize the return on your investment.
